Valplast[®]

Removable Non-Metal Partial Denture

Discover
the many
advantages
of using Valplast
Flexible Partials.

You and your dental professional have many options for replacing lost or extracted teeth.

The Valplast Flexible Partial is an unbreakable, removable partial that many people find very comfortable. This lightweight partial is practically invisible, and completely eliminates the metal clasps which may be causing you irritation.

- **Discover** the strong, durable plastic that snaps securely and comfortably into place around your existing natural teeth and gums.

- **Discover** the plastic used which is so strong that the partial made from it can be thin enough to eliminate that heavy, bulky feeling that makes wearing metal partials so unpleasant.

- **Discover** the color, shape and design of Valplast partials, which blend with the natural appearance of your gums; making the partial virtually invisible.

- **Discover** why dentists recommend Valplast partials as a viable alternative for full denture patients who are allergic to acrylic.

- **Discuss** your oral healthcare needs with your dentist. Discover a lighter, more comfortable and more esthetic removable partial with Valplast Flexible Partial.
